TaskCycle Mini - Work Instructions

Note for the tester:

This project is still in development. The landing page you see is just a placeholder. The app being tested is called TaskCycle Mini a free, standalone app that will also be included inside the full version of TaskCycle, which is still being built. Your feedback will help ensure the core systems are solid before the full app is released.

1. Basic Persistence Test

- Create a new list.

- Add a few tasks to that list.

- Refresh the page.

- Confirm the list and tasks are still there after refresh.

2. Auto Reset Behavior

- Go to Settings > Cycle Mode and turn Auto Reset ON.

- Complete every task in the list.

- Confirm that tasks automatically reset once all are completed.

- Now turn Auto Reset OFF.

- Complete every task again.

- Confirm that tasks do not reset automatically.

- Press the Complete button manually.

- Confirm that the tasks reset after pressing the button.

3. Reminders and Notifications

- Go to Menu > Reminders & Notifications.

- Enable the global Enable Reminders setting.

- Press the bell icon on at least two tasks.

- Set the reminder time to 1 minute ahead.

- Wait at least one minute.

- Confirm that app notifications appear.

- Try dragging the notification to a new position.

- Press the X to close the notification.

- Return to the Reminders panel and disable reminders.

4. Recurring Task Setup

- Turn Auto Reset on

- Go to Settings and enable 'Always Show Recurring Button and Task Options.'

- Open the task option menu and press the recurring icon for one task.

- Refresh the page and confirm a recur icon appears.

- Go to Menu > Manage Recurring Settings.

- Click on the task and press Change Settings.

- Press Show Advanced Options.

- Enable Specific Date and choose todays date.

- Enable Specific Time and choose a time two minutes ahead.

- Press Apply.

- Confirm the setting was saved.

- Exit the panel.

- Press the Complete button to reset the task.

- Confirm that the recurring task disappears.

- Wait for the time to arrive and confirm the task reappears.

5. Batch Recurring Update

- Set all other tasks to recurring using the task option menu.

- Go to Manage Recurring Settings.

- Select all tasks and press Change Recurring Settings.

- Uncheck Specific Date.

- Hide Advanced Options.

- Change recurrence to Weekly.

- Press Apply.

- Confirm that all tasks now show a weekly recur icon.

6. Stats Panel Check

- Create a new task.

- Refresh the page and confirm all recurring tasks show a recur icon.

- Press the Complete button.

- Confirm that all recurring tasks disappear from the list.

- Create two more tasks.

- Open the Stats Panel (swipe left or press the arrow).

- Confirm that the cycle count and other stats are updated correctly.

7. Cycle Count Accuracy

- Make sure Auto Reset is still ON.

- Press the Complete button five times. (Wait about 1 second between each press.)

- Return to the Stats Panel.

- Confirm that the cycle count has increased accordingly.

Note: Cycles only count when using Auto Reset or Manual Reset modes. They do not count in To-Do List mode.
